A PROGRAM OF *TELEVISED* CONTINUATION
MEDICAL EDUCATION FOR PHYSICIANS
IN THE GREATER NEW YORK METROPOLITAN AREA

The New York Academy of Medicine is pleased to announce that beginning on January 8, 1963, the weekly Tuesday evening **CORRELATED CLINICAL SCIENCE COURSE** will be televised from Station WNYC-TV, UHF Channel 31, thus taking to your homes and hospitals this well-known program of continuation medical education. (The sessions of this course in Hosack Hall, at the Academy, will be discontinued.)

The present plan contemplates 16 one-hour seminars to be broadcast between 9 p.m. and 10 p.m. on Tuesday evenings through April 30th. If well received by the profession, broadcasts will be resumed on a regular basis in the fall.

Reception of programs from New York's first ultra-high frequency (UHF) station is excellent within a 25-mile radius of its antenna at the top of the Empire State Building, and good reception has been recorded at the end of the "line of sight", which is 39 miles from the Empire State Building, and as far out as Princeton, New Jersey.

To receive the UHF programs on most present home television sets (VHF), it is only necessary to attach a small converter which changes the UHF Channel 31 to VHF Channel 6. Converters may be purchased from local television supply stores, and will cost between \$17 and \$30, depending on whether installation is done personally or by a technician. In many locations, it will be possible to utilize aerials in their present positions, but in some special instances a shift in position may be necessary for best results. A number of the newer television sets on the market are already equipped to receive both VHF and UHF broadcasts, and after April 1964 all sets will be required by law to be equipped to receive broadcasts from both VHF and UHF stations.

Questions concerning the programs will gladly be answered by the Office of Medical Education at the Academy.

AIMS C. MCGUINNESS, M.D.
Executive Secretary,
Committee on Medical Education
